INTRODUCTION

• Memory is a complex, multifaceted mechanism. Have you ever had an experience where you are trying to remember something but it just won’t come to mind, and once you aren’t thinking about it anymore?

• Memory is a complex, multifaceted mechanism. Have you ever had an experience where you are trying to remember something but it just won’t come to mind, and once you aren’t thinking about it anymore?

• Memory is a complex, multifaceted mechanism. Have you ever had an experience where you are trying to remember something but it just won’t come to mind, and once you aren’t thinking about it anymore?

HYPOTHESES

• It is predicted that the blocking effect demonstrated by Smith et al. (2003) will be replicated.

• It is predicted that the blocking effect demonstrated by Smith et al. (2003) will be replicated.

• It is predicted that the blocking effect demonstrated by Smith et al. (2003) will be replicated.

• It is predicted that the blocking effect demonstrated by Smith et al. (2003) will be replicated.

• It is predicted that the blocking effect demonstrated by Smith et al. (2003) will be replicated.

METHOD

• Experimental Group (N = 65, Critical list recall was maintained across multiple tests (Gunawan et al., 2008).

• Experimental Group (N = 65, Critical list recall was maintained across multiple tests (Gunawan et al., 2008).

• Experimental Group (N = 65, Critical list recall was maintained across multiple tests (Gunawan et al., 2008).

• Experimental Group (N = 65, Critical list recall was maintained across multiple tests (Gunawan et al., 2008).

• Experimental Group (N = 65, Critical list recall was maintained across multiple tests (Gunawan et al., 2008).

RESULTS AND DISCUSSION

• Our results were consistent with previous studies demonstrating hypermnesia and reminiscence.

• Our results were consistent with previous studies demonstrating hypermnesia and reminiscence.

• Our results were consistent with previous studies demonstrating hypermnesia and reminiscence.

• Our results were consistent with previous studies demonstrating hypermnesia and reminiscence.

• Our results were consistent with previous studies demonstrating hypermnesia and reminiscence.
